PROFESSIONAL EXPERIENCE

Data Analyst II

PacificSource Health Plans | Portland, OR

February 2021 – March 2025

- Analyzed end-to-end member journeys using Snowflake (SQL) and statistical methods (cohort analysis, regression, hypothesis testing) to identify drop-offs, increasing conversion by 25%.
- Engineered automated A/B testing pipelines in Airflow, dbt, Python, and Snowflake, enabling hypothesis-driven experimentation and statistical significance testing, accelerating analysis 3 times faster.
- Designed dimensional data models (fact/dimension tables, star schema) for MMM and LTV use cases, enabling scalable and consistent analytics across BI layers.
- Integrated Salesforce, Google Analytics, and Snowflake to build self-serve datasets for funnel, retention, and engagement analysis, reducing ad-hoc requests by 40%.
- Built governed semantic layers and standardized KPI definitions in dbt, improving data consistency, lineage, and trust across business teams.
- Developed ETL validation pipelines with data quality checks, governance controls, reducing QA efforts by 25%.
- Created executive dashboards in Power BI and Looker, translating complex analyses into insights on CAC, conversion, retention, and revenue for VP-level stakeholders.
- Built an LLM-powered funnel analytics system using Snowflake, OpenAI, and Power BI to diagnose drop-offs and friction points, driving a 15% conversion lift and cutting analysis time by 70%.
- Collaborated using Git-based version control (branching, PR reviews) to manage analytics code, ensuring reproducibility and deployment reliability.
- Mentored junior analysts on SQL, data modeling, and dashboard best practices, improving team efficiency and onboarding.

Product Developer

Sparksoft Corporation | Baltimore, MD

November 2020 – February 2021

- Conducted A/B testing and analysis to optimize product features, enhancing ROI by 15%.
- Automated ETL workflows and optimized Snowflake schemas, reducing query time by 30%.

Data Analyst

Index Analytics | Baltimore, MD

February 2020 – July 2020

- Built Tableau dashboards for leadership to track operational KPIs.
- Developed Python data-cleaning pipelines, cutting preprocessing time by 40%.

PROJECTS

- **LLM-Based Customer Insights Platform:** Built a GenAI-powered analytics interface using OpenAI and Snowflake UDFs to summarize large datasets, generate insights, and recommend customer retention actions.
- **Customer Churn Prediction:** Developed a predictive model in Python and Snowflake combining transactional and feedback data to identify high-risk customers, improving retention strategies.

EDUCATION

- **Master of Science in Information Systems** | University of Maryland Baltimore County 2018 –2020
- **Bachelor of Engineering** | University of Mumbai (INDIA) 2013 –2017

TECHNICAL & ANALYTICAL SKILLS

- **Languages:** Python, SQL (Snowflake, SQL Server), VBA
- **Data Engineering/ Analysis:** ETL, Airflow, dbt, Data Modeling, Data Quality, Google Analytics
- **AI & ML:** OpenAI API, LangChain, LLM Integration, Predictive Modeling, A/B Testing
- **Visualization:** Power BI, Looker, Tableau, Excel PowerPivot
- **Cloud:** Snowflake, Azure, API Integrations, Data Governance
